Employee Handbook

A learning document based on public GitLab Handbook sources

This document summarizes selected publicly available GitLab policies for an educational Retrieval-Augmented Generation (RAG) project. It is a summary, not a replacement for the official handbook. Policies may vary by country, employment arrangement, and applicable law.

1. Time Off and Leave

GitLab distinguishes regular time off, such as vacation, sick time, and public holidays, from longer leaves of absence for specific circumstances. The official handbook provides separate policies for these categories.

2. Flexible Paid Time Off

GitLab's published Flexible Paid Time Off policy does not set one specific annual PTO limit for team members. Employees should coordinate planned time off with their manager and prepare a coverage plan. More than 25 consecutive calendar days requires special permission under the published policy. Location-specific requirements may apply.

3. Planning Time Away

The handbook recommends giving advance notice for planned time off. Its general guidance asks for at least twice as many days of notice as the planned absence; for example, three days away requires six business days of advance notice. Team members must record time away in Workday, according to the published guidance.

Workplace and Employee Support

4. Sick Time

GitLab publishes a separate Sick Time policy. The handbook describes paid sick time of up to 25 days for eligible team members within a rolling 12-month period. Reporting, documentation, and statutory entitlements can depend on the employee's location. The applicable local policy should be checked before relying on a general summary.

5. Remote Work

GitLab describes its work environment as all-remote and provides resources to support team members working remotely. The public benefits handbook explains that benefits and employment arrangements may differ by location. This summary does not establish that every role or every employment arrangement has identical terms.

6. Benefits and Professional Support

GitLab's public benefits handbook covers areas such as health and well-being, family benefits, financial security, professional growth, and time-off flexibility. Some benefits are company-wide, while others are specific to an employment entity or country.

7. Where to Confirm a Policy

For a policy decision, consult the relevant official handbook page and the section applicable to the employee's location. This document does not invent a standard working-day schedule, a fixed annual vacation allowance, or a universal training budget.

Official Sources and Limitations

8. Official Source: Time Off and Absence

Important Limitations

This educational document summarizes selected statements from public GitLab Handbook pages. The pages may change over time. It is not legal advice, and it is not a complete statement of GitLab policy. If a question cannot be answered from this document, the RAG assistant should say that the information is not available in the provided context.
